

CGNET eMail GateKeeper

Comprehensive, Outsourced eMail Protection

Reduce email management costs by eliminating spam and viruses, ensuring email continuity and facilitating email systems upgrades. GateKeeper provides this in one simple outsourced solution. GateKeeper is the most cost-effective way of managing your email system. As an outsourced solution, GateKeeper requires no hardware, software or ongoing maintenance, and virtually no integration. It can be deployed in a few days. Updates are performed automatically, at no extra charge. Your email management costs are more predictable, since they're based on a consistent monthly fee. GateKeeper reduces bandwidth requirements, mail server CPU cycles, message storage and administrative resources.

GateKeeper resides between your organization and the public Internet, shielding your email servers from unwanted mail and insecure content, virtually at the turn of a switch.

Customer Experience

"I used to receive complaints about spam, but not any more. And I can see by the numbers that this solution is catching hundreds of thousands of spam per week. I know spammers are trying to get through. They just don't have the pleasure of reaching us."

- Enrica Porcari
CIO
CGIAR

"GateKeeper's reduction in spam has also cut the amount of time we have to spend looking at logs, non-delivery receipts and anti-virus reports. We're also seeing reduced loads on our Exchange server as more spam is routed out before reaching us. Needless to say, we're very happy with our spam protection."

- Dan Hinckley
Electronic Communications
Coordinator
World Conservation Union

Industry-Leading Anti-Spam Technology, and More

By combining Symantec's most comprehensive spam and virus detection with CGNET's backup services, we provide a level of reliability not available from individual solutions. After a one-step modification of your DNS setup, all messages are redirected through Symantec Hosted Mail Security and then through CGNET's Network Operations Center for real-time processing, before delivery to your email servers.

Symantec Hosted Mail Security features award-winning Brightmail AntiSpam and Symantec AntiVirus technologies, flexible quarantine management, graphical reporting and protections against directory harvest attacks and other email-borne threats. CGNET also maintains a real-time backup of all incoming email for at least two weeks. In the event your systems fail, all email can be restored. CGNET's backup service is redundantly configured at two geographically separated Network Operation Centers, insuring the continuous flow of your email.

CGNET also offers a range of additional services to make your email safe and secure. Personnel at our 24/7 Network Operations Center monitor email servers around the world, checking their functioning and ability to send and receive messages every ten minutes. We also offer non-stop business continuity, message archiving, hosted email servers and mailboxes, and collaboration technologies such as Microsoft SharePoint and Live Communications Server.

CGNET Is Your Global Messaging Expert

For over 23 years, CGNET Services International has provided global information networks and communications services to many of the most prominent nonprofit organizations and foundations in over 130 countries. CGNET extends our clients' reach, particularly in challenging environments and difficult to reach geographies. We do this by providing stellar services in the areas of network design, implementation, eMail services, maintenance and support.

Our clients are nonprofits of all sizes with headquarters throughout the world, including the David and Lucile Packard Foundation, the Hewlett Foundation, the World Bank, the African Development Bank, CAB International, Conservation International, the Consultative Group for International Agricultural Research, and the International Development Research Centre. For an extensive list of CGNET clients, see our web site at <http://www.cgnet.com/about/clients.htm>.
