

CGNET: The global communications network for organizations serving human needs.

Worldwide Consulting

CGNET provides consulting on all aspects of voice and data network design, configuration, implementation, operation and evaluation.

We have consulted for organizations in 63 countries. Typical consulting projects include:

Email network optimization and upgrade: CGNET provides services to improve an existing email network's reliability, security, performance and disaster recovery.

Network infrastructure vulnerability analysis: Typical services include scanning for vulnerabilities over the Internet, on-site review of network infrastructure, firewall configurations and wireless facilities, and review of remote access methods and traffic. Vulnerability analyses can be conducted on a one-time or continuing basis.

Information technology infrastructure and design: CGNET provides designs for entire networks, to optimize efficiency, productivity, standardization, flexibility, security, and provisions for growth. Networks can involve voice and data communications of all kinds.

Network needs assessment: CGNET provides the analysis necessary for an organization to create a detailed Request for Proposal to implement a network.

Worldwide Consulting

A Proud History of International Service

Leveraging CGNET's 20 years providing global consulting gives clients the benefit of a world of experience. Others may know how developing-nation communications works in theory. CGNET knows what works in practice.

*Over the past
20 years,
CGNET has
provided consulting
services in
these 63
countries.*

Afghanistan	Cote d'Ivoire	Malaysia	Sri Lanka

Cape Verde	Indonesia	Peru	United Kingdom
Central African Republic	Italy	Philippines	United States
Chad	Jamaica	Russian Federation	Viet Nam
Chile	Jordan	Rwanda	Zambia
China	Kenya	Senegal	Zimbabwe
Colombia	Malawi	South Africa	

CGNET's consultants are constantly "in country," assessing and establishing networks in regions where telecommunications infrastructure is marginal at best.

Key staff members also have experience running IT and networking departments. These staff members know an IT manager's needs and work to ensure those needs are met.
