

Company and Clients

FOR ALMOST 25 YEARS, CGNET has been providing globally managed IT and communications services to foundations, nonprofits and NGOs. We take great pride in working with our clients, to help change lives and build better communities. CGNET supports our clients' great efforts by providing innovative and reliable IT services wherever in the world they are needed. Over the years, we have traveled to and worked in more than 100 countries, and our managed services network currently extends to more than 130 nations. We also have a large, loyal base of customers whose primary offices are frequently located in the United States.

CGNET's aim is to increase our clients' abilities to help their beneficiaries by providing increasingly effective IT services at increasingly affordable rates. We accomplish this by introducing new cost-effective services that specifically meet the organizational needs of our clients. Our set of managed services offers solutions in the areas of:

- Managed hosting
- Remote monitoring and management
- Security and spam control
- Business continuity
- Travelers' Internet access

As technology evolves, we continue to introduce new services, such as hardware virtualization for enhanced reliability, and personal satellite communications terminals to extend your reach.

CGNET's Professional Consulting Services will reliably manage your existing IT network, as well as provide IT assessments and upgrade design recommendations. CGNET can also help you strategically plan for your future computing and communication needs by:

- Enabling you to focus your valuable internal IT resources on new initiatives by offloading management of your existing network
- Augmenting your staff expertise both at home and in remote parts of the world
- Implementing new IT initiatives that are presently beyond your staffing resources

The CGNET Approach

CGNET has succeeded in helping nonprofits for more than a generation because of our people, their skills and commitment, and the environment in which they operate.

Skills: Our staff has an unusually high overall level of education and experience, combined with a breadth of practical experience that results in responsiveness and creativity.

Commitment: We work to earn our clients' trust by understanding your organizational imperatives. CGNET has a remarkable retention record, with many clients working with us for more than a decade.

Structure: Our "flat" company structure means that your account team is empowered to deliver the requested services with minimal delay, and you have access to our most senior decision makers in a timely way.

CGNET has always had an affinity for the unique needs of international organizations with widely dispersed operations. Our experience with these projects has given us extensive knowledge of the most applicable technologies and local resources to reduce potential constraints all over the world. We have implemented projects from Afghanistan to Zimbabwe, and 91 countries in between. CGNET maintains a network of field consultants on four continents. We have always found international work exciting, particularly when it can help provide relief, protect the environment or reduce global poverty.

Satellite TAS comes to Chad

Until Satellite TAS, CGNET's satellite-based Internet access service, arrived in Mongo, Chad, Naoura Deli, project coordinator for FIDAFRIQUE's PSANG 2 project, had to drive 11 hours to N'Djamena to pick up his email.

Mongo is far from the electric grid. All the power at PSANG 2's offices is provided by generator. The area is far from deserted, however. Mongo has more than 20,000 residents, and it is surrounded by more than 200 villages in which PSANG 2 works.

The goal of the PSANG 2 project is to increase food security in the region by increasing food production and new sources of revenue, increasing the negotiating abilities of the most vulnerable groups, and providing better access to clean water, nutritional education, and literacy training, particularly for women. It is a project of FIDAFRIQUE, an effort for Central and West Africa of the International Fund for Agricultural Development.

PSANG2's Satellite TAS rBGAN terminal unit and exterior antenna were brought to Mongo by Issa Lawali CGNET's field consultant, based in Niamey, Niger.
